

Social sciences & the art of testing

What testers can learn from social sciences

@huibschoots

Our brain

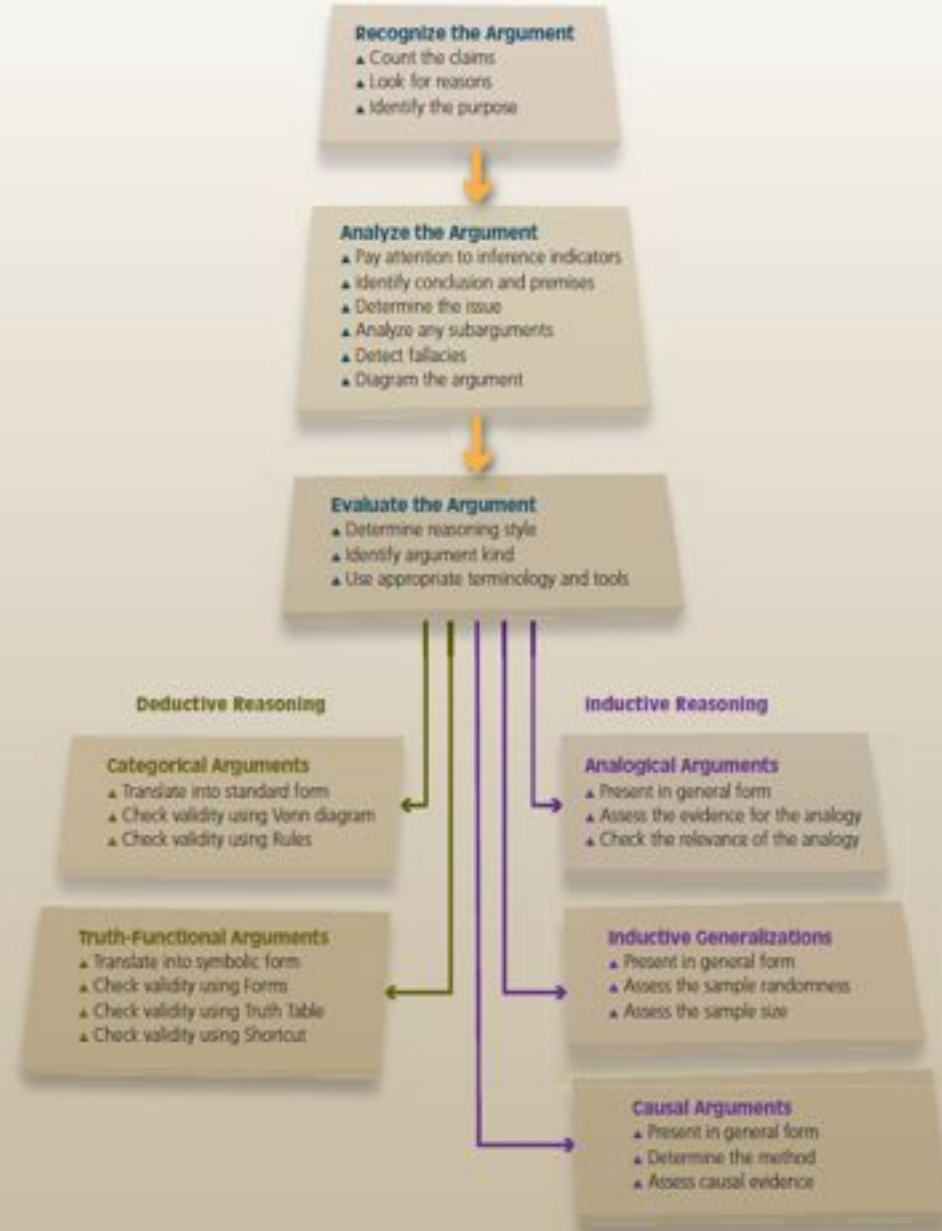

People are irrational

Critical Thinking

- Recognise argument
 - Analyse argument
 - Evaluate argument
-
- Deductive (top-down) & Inductive (bottom-up) reasoning

Steps for Critical Thinking

Critical Thinking

Huh?

What does this mean?

What is the point?

Really?

Are you absolutely certain?

How do you know?

And?

Is there more?

Do you know the whole story?

So?

Where does this lead?

So what?

Creative & critical thinking

Test Stages and Styles of Thinking				
Test Stages				
Documentation Review	Test Planning	Test Execution	Test Analysis	Test Reporting
<ul style="list-style-type: none"> • Requirements • HLD • Feature docs 	<ul style="list-style-type: none"> • Test Ideas • Automation • Feature files • Missions • Charters 	<ul style="list-style-type: none"> • Test Models • Heuristics • Note Taking • Session Based Testing 	<ul style="list-style-type: none"> • Bug Investigation • Defect reporting • Repeatability • Questioning • Automation 	<ul style="list-style-type: none"> • Dashboard • Wiki - Sessions • Plan updates • Qualitative • Quantitative
Critical Thinking	Critical Thinking	Critical Thinking	Critical Thinking	Critical Thinking
	Creative Thinking			Creative Thinking
Creative Thinking		Creative Thinking	Creative Thinking	Creative Thinking
The larger the thinking area the more focus on that style of thinking				

System Thinking

What is testing?

Testers light the way.
(RST)

Testing gathers
information about a
product with the
intention to inform a
decision
(Jerry Weinberg)

Social science

“To test effectively, our theories of error have to be theories about the mistakes people make and when / why they make them”

What is Social science?

About your opinion...

- What did I find out?
 - Not prove yourself right
 - Prove yourself wrong
- First collect data, then judge / have an opinion

Thinking Fast & Slow

Biases & Fallacies

You are not so smart

- **Cognitive biases**
Predictable patterns of thought that lead to incorrect conclusions.
- **Logical fallacies**
Is when you reach a conclusion without knowing all the facts.
- **Heuristics**
Mental shortcuts to reach a solution used too fast.

Dunning-Kruger Effect

Effect in which incompetent people fail to realise they are incompetent because they lack the skills to distinguish between competence and incompetence.

Dunning-Kruger Effect

Confirmation Bias

You tend to look for information that confirms your beliefs and ignore the information that challenges them.

- Biased search
- Biased interpretation
- Biased memory

Movie Perception Test

Software

A close-up, black and white photograph of a computer keyboard. The keys are dark with white characters. The focus is sharp on the keys in the foreground, while the background keys are blurred. The keys visible in the foreground include 'w', 'e', 'd', 'z', 'x', and 'c'. The lighting creates highlights on the edges of the keys, emphasizing their three-dimensional shape.

Quality

Numbers & counting

CSI?

Testing is about...

Skills

Experiments

Communication

People

Thinking

Learning

Decision making

Collaboration

Summary

- Be aware of what you do in testing
- Learn from what people do in social sciences
- Do quantitative AND qualitative research
- Think!
- Be aware of biases and fallacies
- Accept and deal with ambiguity, situational specific results and partial answers

Episode 1 - A Taste

Episode 2 - Illusions

Episode 3 - Know Thyself?

Episode 4 - Intuition and Rationality

Episode 6 - The Experiment

Episode 7 - Finding Things Out

A Week to Catch up

Episode 8 - Extraordinary Claims

Episode 9 - Health Claims

Episode 10 - Applied Thinking

Lives at stake

Conversation with Scott Allen (Part 1)

What's the harm?

Conversation with Scott Allen (Part 2)

Clever hands

Conversation with William Thompson

Evidence-based evidence

EVIDENCE-BASED EVIDENCE

...many people to suggest that
 in fingerprint identification. Now you and I spend a lot of our time working on this stuff. Contrary to what you see on "CSI," it's not computers that match fingerprints and interpret DNA profiles. It's actually a human.

That's right, and because we're dealing with humans here, that's when things get interesting.

It's not up to a computer. It's not simply a matter of going to a crime scene, dusting for prints, getting the bloody print, putting it into a computer, and up pops the...
 The driver's license of the person who committed the crime.
